CS450 PA2 - How to build and execute

The following instructions assume that you are running these commands on a linux system with `qemu` and `build-essential` installed. The *executables* `xv6.img` and `fs.img` are included in the source folder.

Building

To build, run the following command in the source folder.

```
make
```

Executing

To run the compiled images, run the following command in the source folder.

```
make qemu-nox
```

The shell prompt for xv6 should appear shortly after in the same terminal.
